

Information flow –
From the office to
production

Consistent.
Streamlined.
Connected.

Continuous Information Flow

From the office to production

Newly emerging technological possibilities also influence the information flow within different business processes - and reveal great potential for optimization. With the „Continuous Information Flow“ consulting service, we help you draft a concept for the optimum use of information flows.

On the basis of your business processes and a production analysis, we analyze and assess the current information flow within your company. We will draft a customized strategy to reduce weak points in your information flow and to eliminate redundancies.

1 YOUR BENEFITS

- Optimization of the **information flow** in the following business processes, among others: winning orders, procurement, design engineering, manufacturing, assembly and shipping
- Improvement of **data quality**
- **Reduction** of data management costs
- **Easier** data administration
- Definition of the **necessary** manufacturing and machine data (production lists, cutting data, CNC data, manufacturing and order documents, etc.)
- **Elimination of redundancies** and media disruptions
- **Reduction** of data interfaces of any kind

2 OUR FOCUS

- Analyzing the continuity of information flows from the office to production, i.e. from order intake to shipping
- Assessing the current situation and identifying optimization potential
- Creating an ideal organizational concept
- Creating an IT concept
- Support in software selection
- Identifying redundancies
